WORKING PAPERS	“Automation Threat and Labor Market Power” (Job Market Paper) This paper studies the role of automation threat in firms’ labor market power. Employing the production approach, I show that workers in an average German manufacturer receive 79 cents on the marginal euro. Using automation threat proxied by local labor market regions’ exposure to industrial robots instrumented by plausibly exogenous shift-share factors, I find that robot exposure increases employer power over routine workers in areas with weaker unions in East Germany with spatial frictions. The empirical findings are consistent with the wage bargaining model where employers retain the “right-to-manage” their workforce composition and unions representing different workers separately bargain with the firm. “Public Works Program, Labor Supply, and Monopsony” (with Nancy H. Chau and Vidhya Soundararajan) This paper studies the role of changes in workforce composition in monopsony power. We develop a monopsony model in which a firm’s wage markdown—the wedge between MRPL and wage—is a weighted average of markdowns for heterogeneous workers. We empirically illustrate the theory using India’s National Rural Employment Guarantee Act (NREGA), which generates non-manufacturing jobs in rural areas. Consistent with the model predictions, at manufacturing firms, we find that the program increases average	

markdowns by crowding out mobile workers and effectively increasing the share of immobile workers with low labor supply elasticity.

“Work Incentives, Earnings and Domestic Violence: Evidence from Sub-Saharan Africa” (with Anh Nguyen)

Using representative data from over 30 countries in Sub-Saharan Africa, this paper presents nearly continent-wide evidence that increasing women’s work incentives and earnings potential, induced by artisanal mining and commodity price rises, decreases violence within the household. We leverage spatial variation in gold suitability and exogenous temporal variation in global gold prices, conditional on industrial mining, to create variation in the profitability of artisanal mining. We identify increases in women’s activities in mining and retail industries relative to men and the rise in women’s intrahousehold bargaining power as mechanisms for the decrease in the risk of intimate partner violence.

“Alcohol Consumption and Intimate Partner Violence: Long-Term Effects of Temporary Alcohol Ban” (with Arnab K. Basu and Nancy H. Chau)

This study traces the impact of a partial liquor ban – from launch to reversal – on alcohol consumption and intimate partner violence. We decompose the long-run effects of a temporary and selective liquor ban on drinking behavior and women’s experience with intimate partner violence to include a policy impact and a policy reversal effect. Leveraging neighbor states comparable and sufficiently isolated in our context as the control group, we employ difference-in-differences and event-study approaches to identify the causal impacts of a policy that shuts down hard liquor-serving local bars. We find that alcohol consumption in bars significantly reduced over the policy period and rebounded after the policy removal, with no impacts on home drinking. Consistent with a policy-induced change in the volume of alcohol consumption during and after the alcohol ban, we find that physical violence declined during the prohibition and overshot its starting level following the reversal only in high-wealth households, the primary consumers of expensive hard liquors most likely affected by the ban.

RESEARCH IN
PROGRESS

“Capital Market Integration, Labor Market Distortions, and Labor Misallocation” (with Nancy H. Chau, Anh Nguyen and Vidhya Soundararajan)

This paper examines the labor market effects of foreign capital liberalization in India, with a focus on labor misallocation and employer market power, a key source of misallocation. We estimate the firm-specific labor markdowns, the gap between MRPL and wage, as a proxy for monopsony power. Leveraging a foreign direct investment liberalization episode as a natural experiment, we use difference-in-differences and event study designs to identify the causal impacts of capital market integration on the labor market. For firms with ex ante high MRPL, liberalization increases employment by 17% and wage bills by 15% and reduces MRPL by 14% and labor markdowns by 15%, with no impact on wages relative to low MRPL firms. These effects are driven by female workers.

“On the Intra-Household Public Goods and Fertility Trade-Off” (with Arnab K. Basu and Nancy H. Chau)

This paper explores an infinite-horizon dynamic model of intra-household public goods, fertility, and child mortality in which child survival is subject to the provision of household public goods. An overlapping generation model we developed explains the empirically observed relationship between fertility rate, household-level public goods, and infant mortality. In this framework, the household public goods provision reduces child mortality and enhances the earning capacity of surviving children. The model demonstrates how intra-household public goods provision is associated with fertility decisions through its impacts on child health and parents’ earning potential in the long run. The model with endogenous household public good provision and intergenerational transfer suggests that households make trade-offs between intra-household public goods and fertility conditional on the survival probability of offspring, a complement of child mortality.

POLICY
WORK

“Exploring Geospatial-Based Approaches to Develop a Pre-Census National Sampling Frame in Armenia” (with Saida Ismailakhunova, Avralt-Od Purevjav and Sarchil Qader), *Under Review*
