WORKING PAPERS **“Automation Threat and Labor Market Power”** (Job Market Paper)
 This paper studies the role of automation threat in firms’ labor market power. Employing the production approach, I show that workers in an average German manufacturer receive 79 cents on the marginal euro. Using automation threat proxied by local labor market regions’ exposure to industrial robots instrumented by plausibly exogenous shift-share factors, I find that robot exposure increases employer power over routine workers in areas with weaker unions in East Germany with spatial frictions. The empirical findings are consistent with the wage bargaining model where employers retain the “right-to-manage” their workforce composition and unions representing different workers separately bargain with the firm.

“Public Works Program, Labor Supply, and Monopsony” (with Nancy H. Chau and Vidhya Soundararajan)

This paper studies the role of changes in workforce composition in monopsony power. We develop a monopsony model in which a firm’s wage markdown—the wedge between MRPL and wage—is a weighted average of markdowns for heterogeneous workers. We empirically illustrate the theory using India’s National Rural Employment Guarantee Act (NREGA), which generates non-manufacturing jobs in rural areas. Consistent with the model predictions, at manufacturing firms, we find that the program increases average markdowns by crowding out mobile workers and effectively increasing the share of immobile workers with low labor supply elasticity.

“Alcohol Consumption and Intimate Partner Violence: Long-Term Effects of a Temporary Alcohol Ban” (with Arnab K. Basu and Nancy H. Chau), *Under Review*

We trace the impact of a partial liquor ban – from launch to reversal – on alcohol consumption and women’s experience with intimate partner violence (IPV) in Kerala, India. Decomposing the policy-induced and reversal effects by employing difference-in-differences and event-study approaches, we identify a significant reduction in alcohol consumption (but only in liquor-serving bars) with an accompanying reduction in IPV during the policy period. However, both alcohol consumption and IPV rebounded to pre-ban levels after the policy removal. Heterogeneity analysis further reveals these effects to be confined only amongst high-wealth households. A battery of robustness tests confirms our findings.

“Work Incentives, Earnings and Domestic Violence: Evidence from Sub-Saharan Africa” (with Anh Nguyen)

Using representative data from over 30 countries in Sub-Saharan Africa, this paper presents nearly continent-wide evidence that increasing women’s work incentives and earnings potential, induced by artisanal mining and commodity price rises, decreases violence within the household. We leverage spatial variation in gold suitability

and exogenous temporal variation in global gold prices, conditional on industrial mining, to create variation in the profitability of artisanal mining. We identify increases in women's activities in mining and retail industries relative to men and the rise in women's intrahousehold bargaining power as mechanisms for the decrease in the risk of intimate partner violence.

RESEARCH IN
PROGRESS

“Capital Market Integration, Labor Market Distortions, and Labor Misallocation” (with Nancy H. Chau, Anh Nguyen and Vidhya Soundararajan)
